In the car SL, the intelligent interior composition of structures, steel, magnesium and aluminum ensures the best possible crash performance and maximum rigidity at weight. Optimized volume crash zones and well-established structural design principles ensure the best possible protection for occupants. Mercedes-Benz technology and the car SL. Other specific measures include aluminum hood, aluminum front wings, aluminum front suspension components, steel roof, steel front suspension subframe, aluminum engine compartment, drive unit and of the rear axle, aluminum rear suspension subframe, aluminum rear axle carrier. The car SL also demonstrates the engineers' efforts to achieve the best possible, customized solutions for each individual component. Thus, for example, the aluminum hood is made of two different alloys, the front wings are made of three different alloys, the front suspension subframe is made of four different alloys, and the rear axle carrier is made of five different alloys.
