Options In Detail

AMG-enhanced 3.0L Inline-6 Turbo Engine w/ 48 Boost and Electric Auxiliary Compressor (M256)

The M256 engine found in AMG 53/ models provides exceptional performance and efficiency. Features include:

- 48 Boost
- The 48V electric 48V system is provided power to the electric auxiliary compressor, the electric power steering (Comfort), 48V Active Suspension and the electrically powered Active Roll Stabilization (ARS)
- 48 Boost makes use of the stored electric power from the 48V battery to briefly boost the performance of the combustion engine when it is required, for example when accelerating or when overtaking with the manual transmission. The 48 Boost unit assists the internal combustion engine in the range of up to 250 Nm and 15 kW at the engine speed.
  - Middle-class AMG 53 models (E-Class, GLC, GLE, GLS) 48 Boost unit is a 15 kW/250 Nm electric motor, which is coupled with the crankshaft of the engine.
- 48 volts to 12 Boost is able to convert up to 48 percent of the power of the 48 Boost unit.
- The 48 volts is able to work quickly, efficiently and quietly, and it is able to provide 12 volts to the 12V battery, the 12V electrical system and the mechanical system. Also, it is able to recuperate energy.
- Power Recuperation
  - The more complex combustion processes from 12V system is able to assist in supplying the engine's electrical consumers with power, which is also referred to as Electrical Power Assist (EPA). And due to the 48 volts system, the 48 Boost unit is able to recuperate power. As soon as a conventional system is unable anymore to recuperate, the 48 Boost unit is able to recuperate the power of the 12V battery. In addition, the 48 Boost unit is able to recuperate energy in the kinetic energy in the engine mode.
  - The 48 Boost unit is able to recuperate energy in the coasting mode and in the overrun mode for the duration of its capacity.

Handcrafted AMG 4.0L V8 biturbo engine (M177 EA0/EB0 5.4 AMG)

E 63 S Sedan Only

- Aluminum crankcase/housing is racing magnesium (lowest-level)
  - The cross-plane flat crankshaft (called lowest-level) is based off of the race engine, only performing by running slower.
  - The crankcase/housing is made from lightweight aluminum alloy, which is a racing magnesium.
- Forged lightweight aluminum pistons - high performance racing pistons
- Two flat-crown piston/pistons with reduced-volume chambers
  - Combustion between the cylinder heads for faster response
  - Improved efficiency
  - Improved combustion characteristics leads to improved efficiency
  - Reduced-volume chambers (piston crown) have a smaller surface area, which is ideal for low heat loss, which results in improved combustion characteristics and improved efficiency.
- Dynamic Engine Mounts - Unique to DYNAMIC SELECT - Sport and Sport+ modes
  - Soft Mount for Comfort - Reduces engine noise and vibration
  - Firm Mount for Sport - Increases steering precision
- Integral Exhaust Manifolds and Cast Iron Turbos
  - Lightweight
  - Light weight

USB AMG Drive Unit Steering Wheel Buttons (Standard)

- The AMG Performance Steering Wheel is equipped with a "Drive Unit" button. This button allows the driver to quickly and easily access the AMG Performance Exhaust System.
- The button is located on the lower left-hand side of the steering wheel for easy, ergonomical of the AMG DYNAMIC SELECT Drive Unit.
- The button is able to be used to open the exhaust when the engine is cold, when the engine is warm, when the engine is used in Manual (conversely known as 'in Neutral'), + when the engine is used in Sport or Sport+ modes.
- Press button once the driver is concentrated into an AMG Performance Exhaust System, which is able to be used in Sport, Sport+ and in Manual (conversely known as 'in Neutral').

Brakes

AMG Black Brakes
Standard on E 63 S models
Optional on E 63 models (Sport)

- Black rear brake calipers, discs, rotors, rotors, rotors
- Black front brake calipers

AMG Performance Exhaust System (E78)

Standard on E 63 S, Optional on E 63 (E 63)
Enough differentiation of the sound from behind by the cover of the additional exhaust flap.
Sound improvements dependent on actuation of the actuator. - Less differentiation between not in actuation position, 1/2 open, 1/4 open and 3/4 open. - Differentiation between 1/2 open and 3/4 open. - Differentiation between 1/4 open and 3/4 open.
Additional control of the sound is controlled by the flap in relation to the rotation speed and the load.
Control of the sound is dependent on the rotation speed and the load. Control of the sound is dependent on the rotation speed and the load. Control of the sound is dependent on the rotation speed and the load.
