

Tool:

- Plastic Wedge

Part:

- Side cover (Part no: A215 780 15 40 for driver side/A215 780 16 40 for passenger side)

Procedures:

Open the roof about 10" and use plastic wedge (or something wide and thin) to pry out the front cover, start from the center and work it out to each side. Do not use screwdriver because you'll put too much stress on one spot and break the cover.

This is with the cover off.

Now, put the roof in tilt position and pull the torn side cover off. Make sure you memorize the position before you pull it out.

Put the new cover on.

Put the front cover back on. Done!
