### PRE-SAFE Impulse Side

Now included in DA2 Driver Assistance Package

PRE-SAFE® can prepare the occupants for a side-on collision and reduce the risk of injury. Like a bodyguard, it pushes the driver or front passenger away from the danger zone towards the inside.

The impulse is created by the movement of the seat side bolsters in the front backrests. Beneath the upholstery there is a balloon which is activated pyrotechnically - similar to an airbag. In the event of an imminent side collision being detected, a gas generator fills the balloon in an extremely short time. As a result the seat side bolster is drawn inwards and transfers the momentum on the occupants towards the middle of the vehicle.

This gives the driver or front passenger more lateral clearance from the door or the trim parts. At the same time the impulse moderately accelerates the occupants forwards. This reduces the differential speed between the accident opponent hitting the side and the occupant: Possible contact with the door panel can occur later and in a mitigated manner. As part of this, PRE-SAFE Impulse Side works in conjunction with the other restraint systems such as the seat belts. This also applies to the side impact airbags and window airbags which are deployed in accidents of greater severity.

#### Components

- Actuators (balloons) for PRE-SAFE® Impulse Side in the driver and front passenger seats
- Radar sensors in the front bumper
- Networking of information from the various control units
