## Brake Wear Calculation

Remaining brake pad life is calculated using:

- Mileage since front brake pads replaced
- $50 \%$ front left brake pad wear sensor input

At 100\% pad wear a warning is displayed.

## Brake Pad Wear Sensors

- Sensors designed differently to avoid improper installation
- One sensor on each front wheel
- left = 50 \% (S10/1)
- right $=100 \%(S 10 / 2)$
- One sensor right rear wheel - 100 \% (S10/4)
- All sensors hard wired to N10/1
