## w166 - completion of the regular Ambient Lighting

Good afternoon!

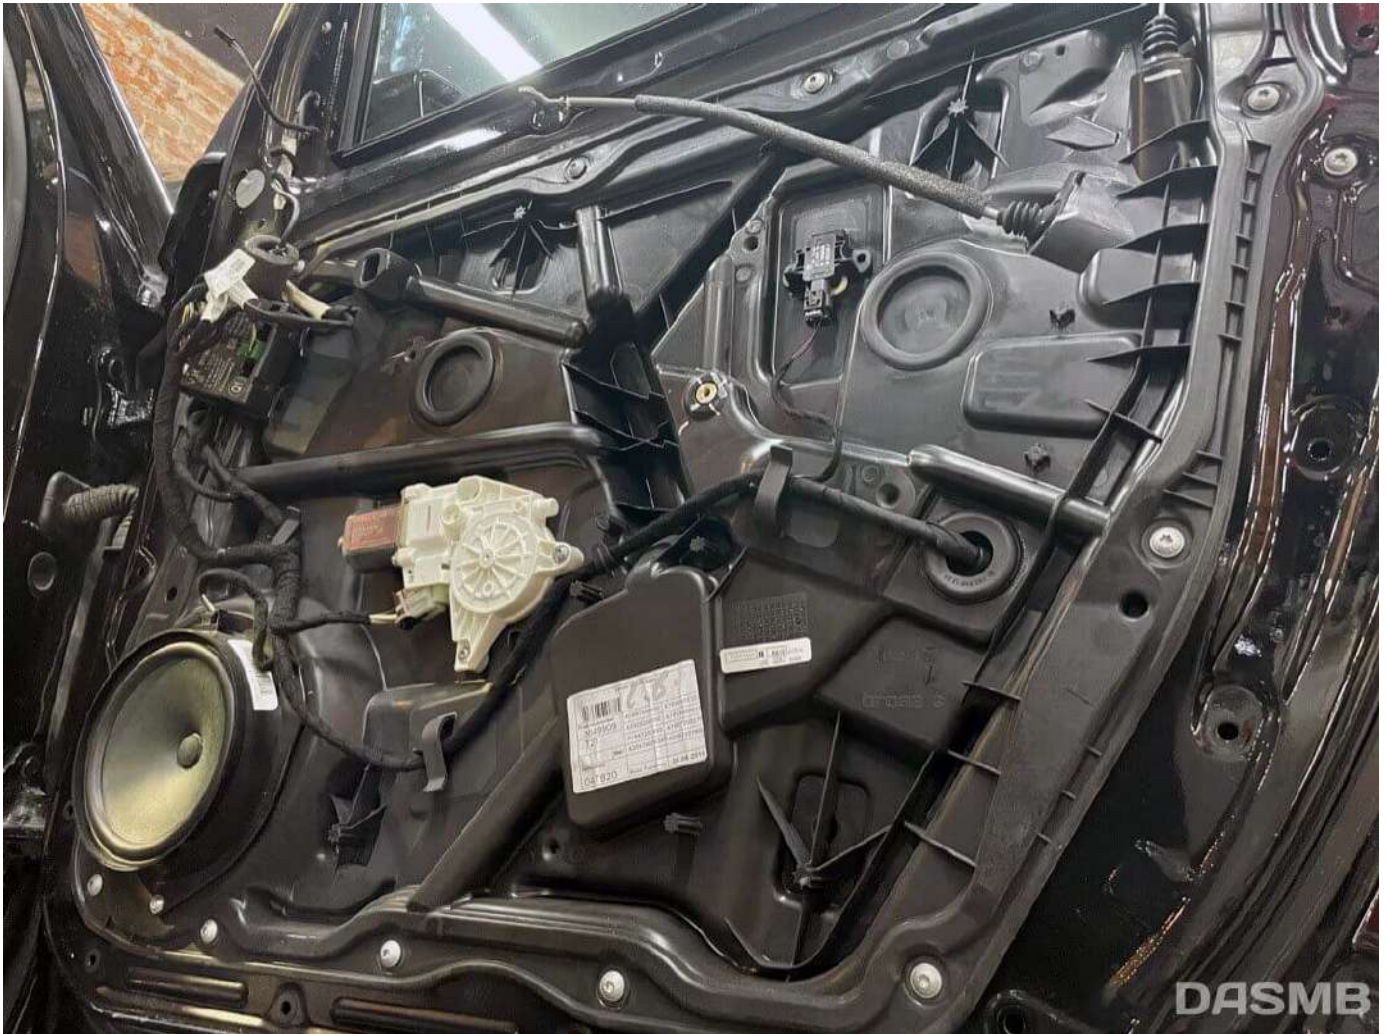

Our guest is GLE in 166 body, the owner of which wanted to expand the standard 3 backlight colors to 12. This is possible by standard methods, by replacing all diodes with original RGB diodes and coding the car.

DASMB

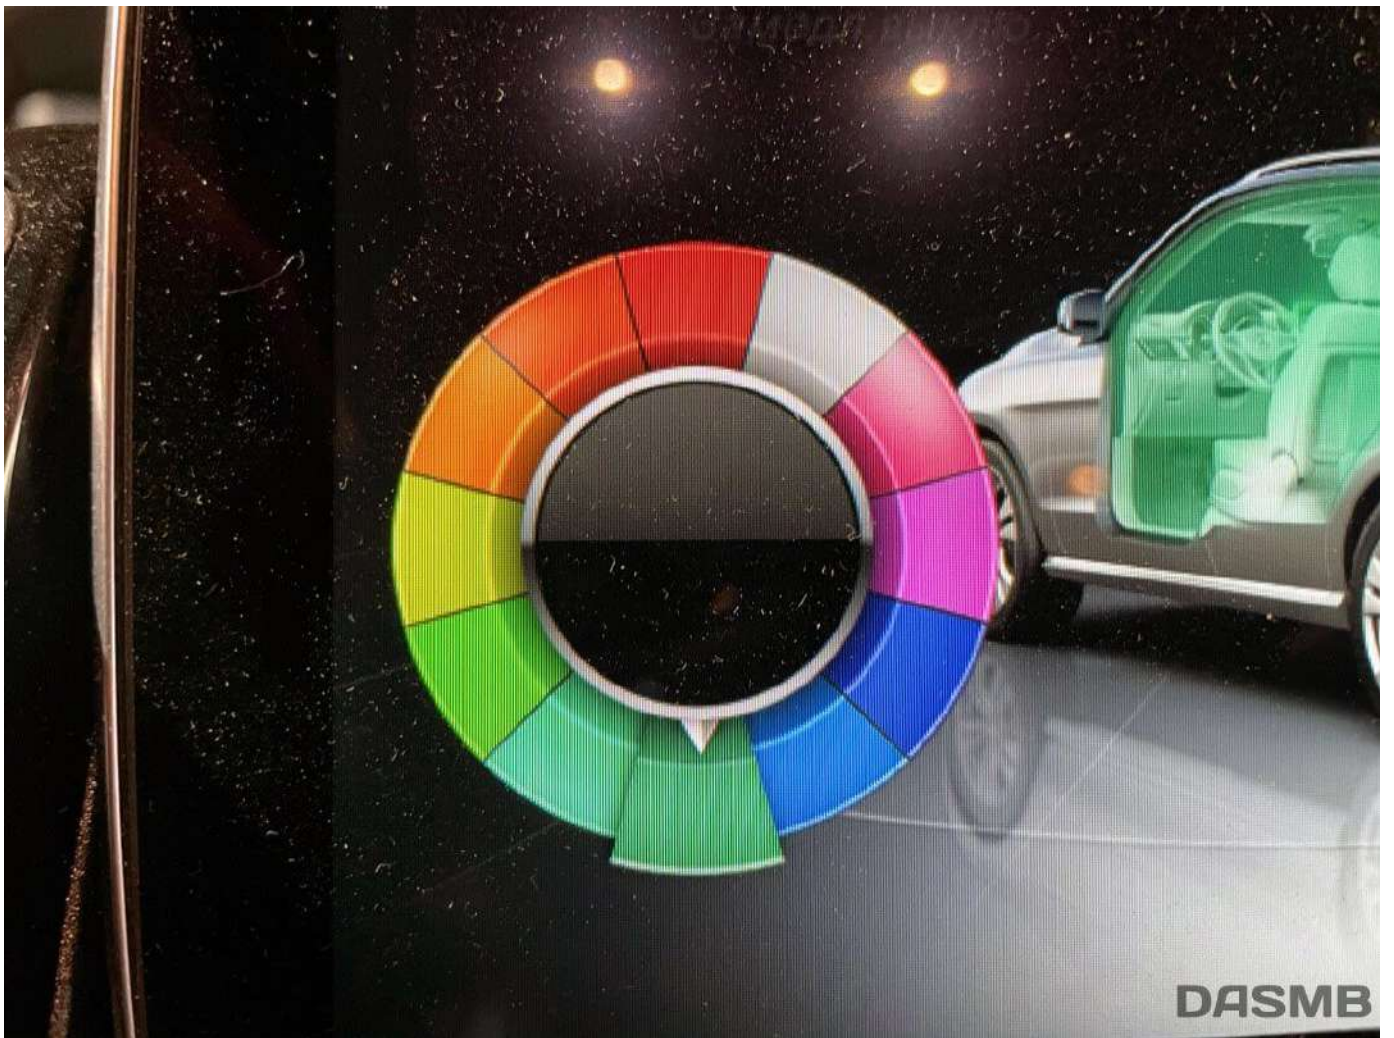

This option is available only for restyled 166, as well as the MFA platform.

Regularly in this car there are 3 colors of comfortable lighting - polar, neutral, amber (in fact - blue, white and orange). In order to increase the number of colors, we need to replace the diodes in the doors, in the center console overlay. Let's get started:

Of course, simply replacing the diodes will not help - it is also necessary to encode the car:

Only after that we can enjoy the result:

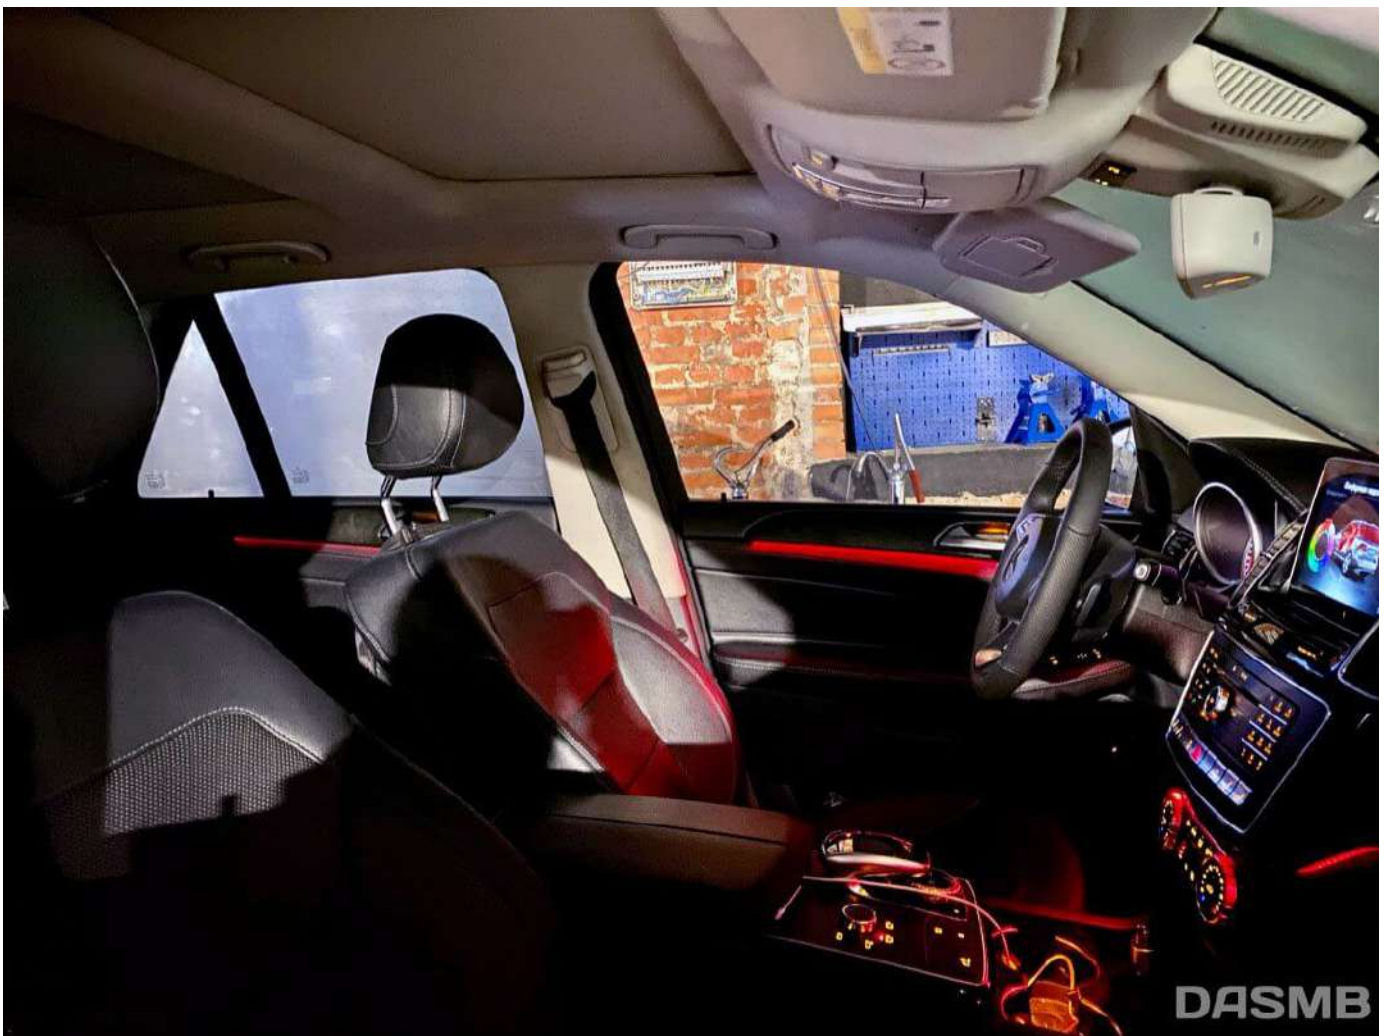

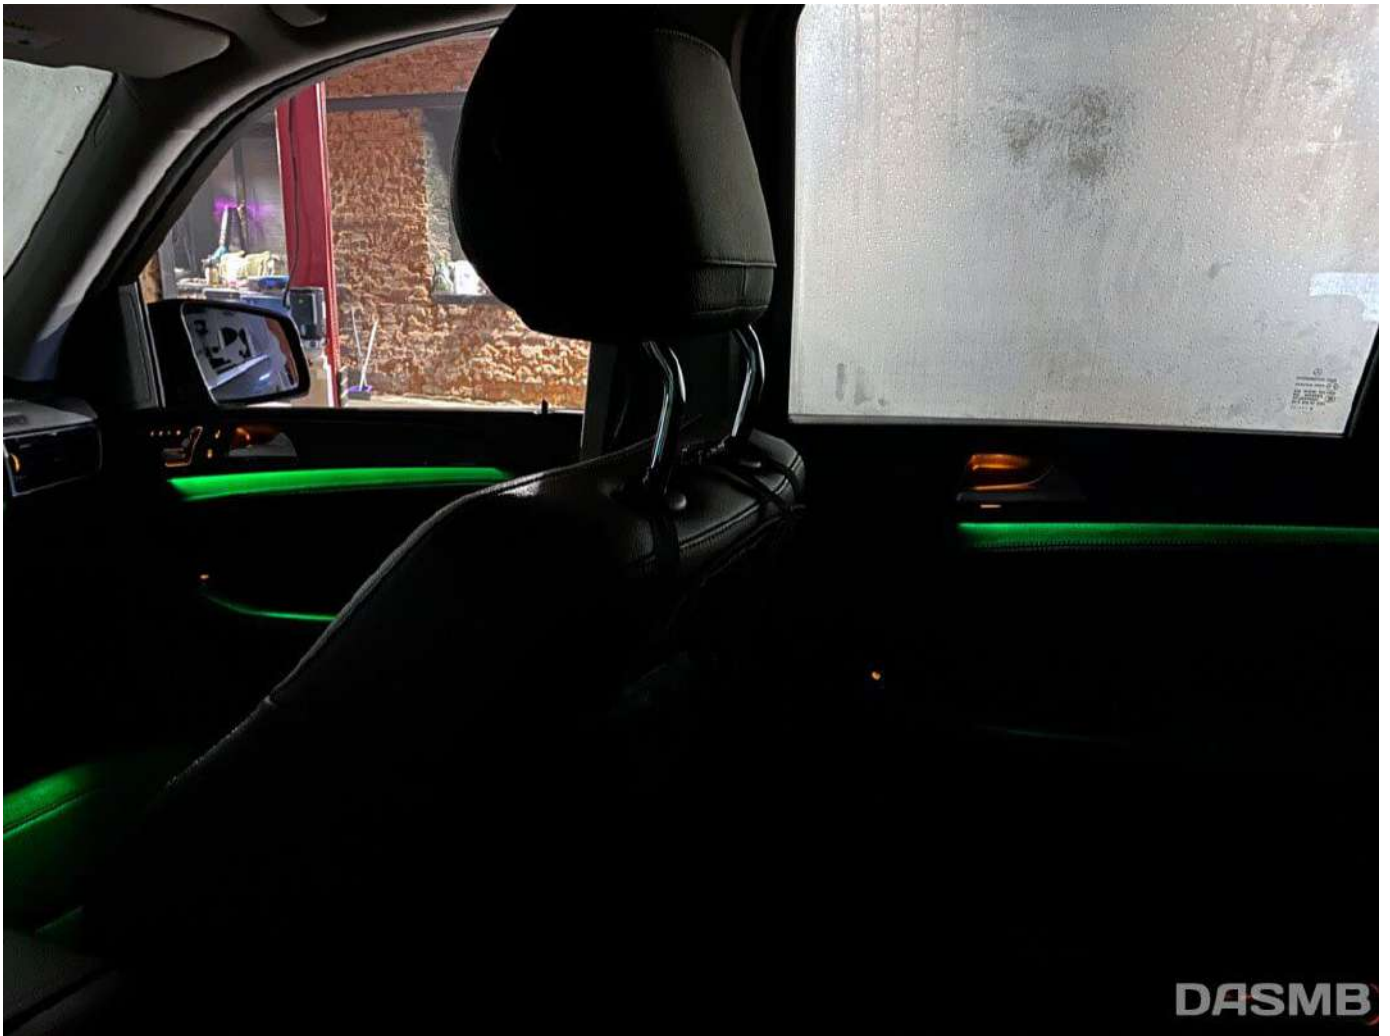

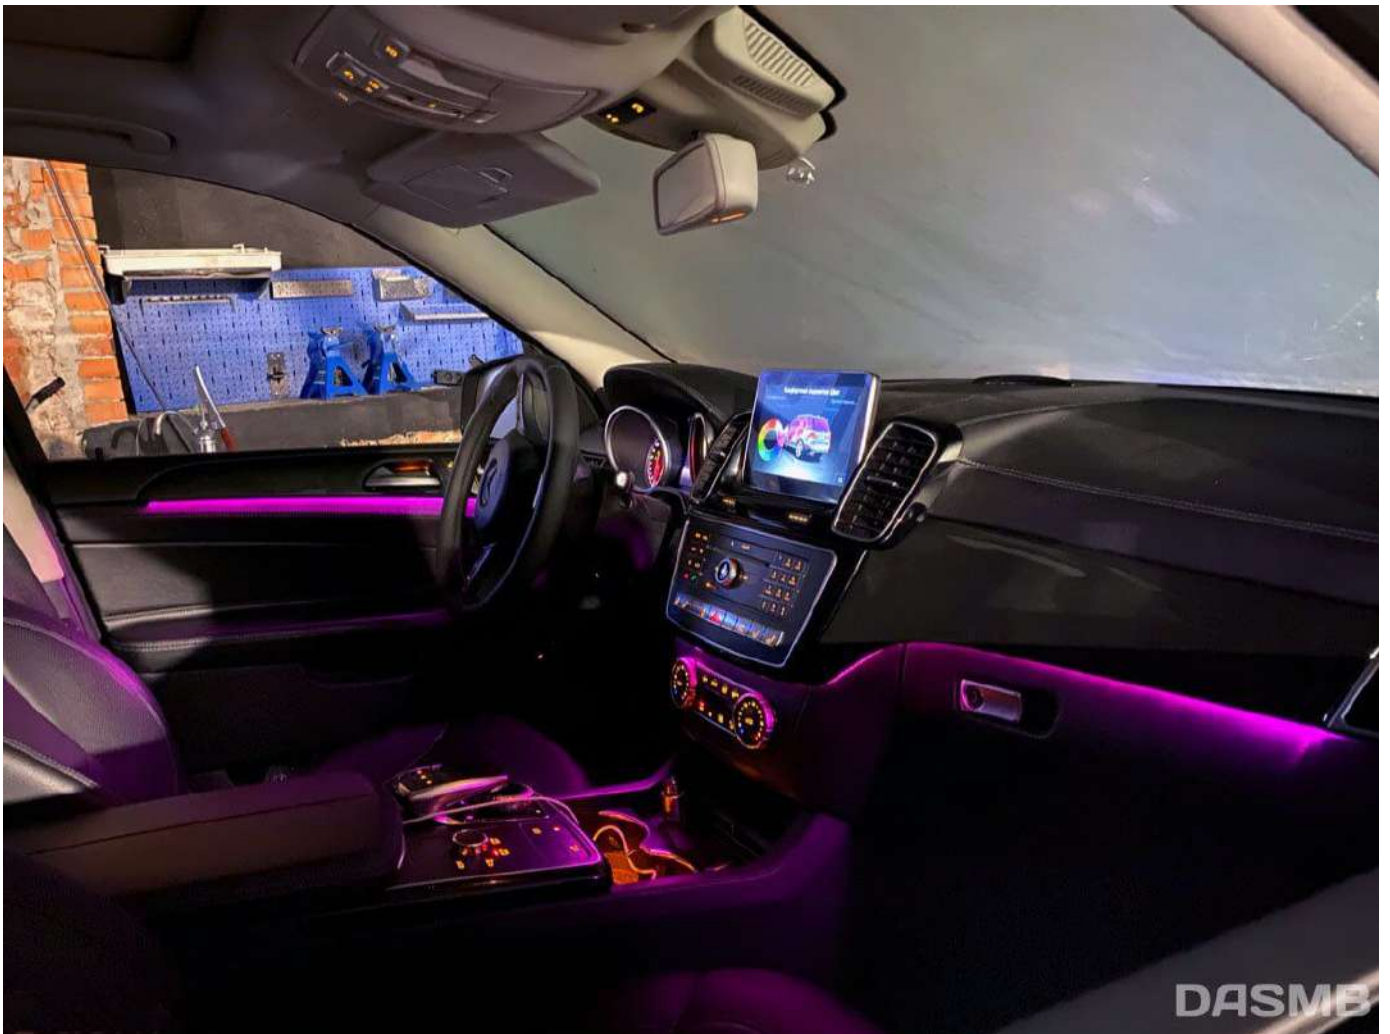

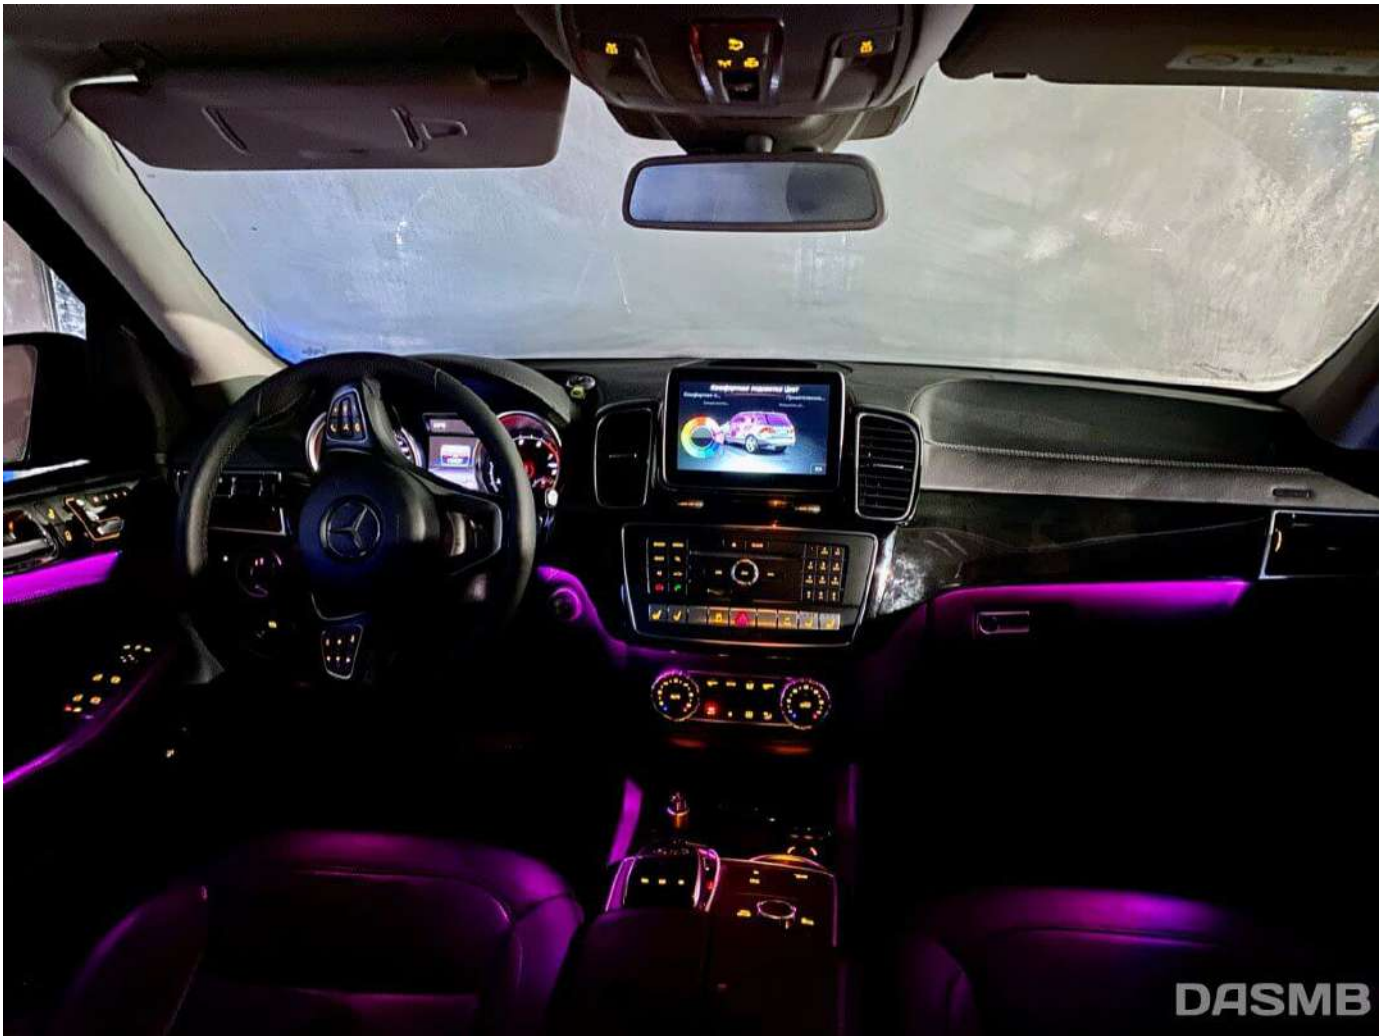

DASMB

DASMB

That's all for today!

Good evening everyone!

It's correct to write "rights reserved" here, but ...

Having the amount of time that remains between working with machines, we do not have time to take all the photos and think through the text from and to, so we copy-paste and look for something in the pictures ... But our works are our works that we copy-paste with us.

## FEEDBACK

We understand how annoying you are with all sorts of pop-up notifications with annoying offers to call back or chat, so we will make it much easier and more convenient: during working hours (from 10 to 20) we have phones - we will discuss all the issues that concern you and your car.. Well, if it is more convenient in writing, then in the old fashioned way - by electric mail ...
