

Hello,  
I was able to install an illuminated star in my 2012 GL450. I will explain as best as I can how I did it. I took pictures that I will attach. I don't know if this will apply to other years or models.

### **Remove Old Star**

- I was able to remove the old star without removing the grill.
- I removed the chrome emblem with a small flat head screwdriver.
- Then with a small flat head screw driver I push the tabs holding the housing in place one by one and pull the housing out.
- After moving the first tabs it was pretty easy to wiggle the housing out pull it towards me.

### **Replacement Star**

There's an Old and New style of replacement stars that fits this truck.  
The New has a black gloss backing (W205)  
(<https://a.co/d/gK7zfPR>)

The Old style has the mesh backing the same as the original.  
(<https://a.co/d/5C6vSRS>)

### ***Old Style***

### **Modification and Install of New style**

- Separate the two pieces of the star
- Place the black backing into the frame of the grill.
- Then twist until it's flushed and locked in the grill.
- It took me a few attempts to get it to line up correctly.

- The emblem snaps into the grill.
- However I found that there was one tab that couldn't snap in place because it was blocked by the frame of the grill.
- I just snapped the tab off and the emblem snapped in the grill.
- It was the bottom tab on my truck

### **Modification and Install of Old style**

The Old style star modification is more labor intensive.

- There are sections of the frame of the star that must be removed to allow for it to fit and lock into the grill using a box cutter or electric heated knife.
- I went with an electric knife and removed about 2 cm for the frame and tab of the star.
- There are 3 tabs on the frame that need to be trimmed.
- The 3 pictures show the same cut with a before/after and from different angles.
- Place the star into the frame of the grill.
- Then twist until it's flushed and locked in the grill.
- It took me a few attempts to get it to line up correctly.

## Wiring the Star

Both styles of star are wired the same.

-The fuse extension provided with the star looked cheap. It was also for a mini-fuse.

-Picked one up from the auto part store.

-The star can be linked to the follow locations:

Headlight fuse (lights up at night)

Brake fuse (lights up with brake lights)

Door unlock fuse (lights up when doors unlock) etc.

-The 2 pictures show how the light can be wired with or without the fuse extension

Installation method (with a fuse extension device)

You can also install the LED star badge by replacing the fuse, which can be connected to any control interface according to your needs. For example: car light fuse, unlock fuse, brake light fuse interface, etc.

We will give you a fuse extension device. (pictured)

I decided to go with a New style star in Black on Black star instead of the original Old style in Chrome on Black star.

The seller on amazon offers the New style in both color schemes. Old style is offered in Chrome on Black only.

I hope this is helpful to someone.

Please feel free to ask any questions, I'll do my best to answer them.

Thanks

Tonya
