

NEW MERCEDES EXTERIOR AND INTERIOR CARE

The newest Mercedes paint technology uses nano-ceramic clear coat for very hard and very durable protection of the color coats underneath.

With nano-clearcoat the days of “buffing a car” to make a Mercedes shine are over – the new polishes and waxes are “wipe-on-wipe-off”.

The 1st step is to apply a EURO TECH SEALANT – which bonds to the nano-clearcoat and provides an excellent shine – this Euro sealant also provides a smooth even foundation to layer durable carnauba wax on top for added shine and deeper luster.

NEW TECH SEALANT - Einzsett is a German manufacturer that produces top new tech car care products and their Glanzwax is the very best new tech sealant that I have personally used. On a dry and clean Mercedes, one section at a time, your objective with Glanzwax is to apply a thin even layer with a clean cloth. Glanzwax will dry to a haze in just a couple of minutes, but let that haze sit/cure for about 30 minutes so it bonds to the nano-clearcoat very well. The Glanzwax is a thin liquid, almost like water, so it is very easy to apply – and the haze is very easy to wipe off with a clean cloth.

Glanzwax is also very good to use for added protection on the alloy wheels of your Mercedes as well.

One can of Glanzwax will easily provide protection for four or five Mercedes – most recoat their Mercedes every six to twelve months - again with Glanzwax sealant the objective is a thin and even coat – the Glanzwax has a very thin consistency, almost like water, which helps in applying that thin and even coat of sealant one small section at a time.

The 2nd step for added shine/luster and for extended life of your sealant underneath is to apply a SPRAY NANO CARNUBA WAX on top of the new tech sealant – the spray carnauba is a wipe-on-wipe-off product as well.

NEW TECH SPRAY CARNUBA WAX – The Glanzwax sealant will provide a very good shine, and will bead rain and wash water like a champ, and in NWA Glanzwax protection will normally last six months or more. Once your Glanzwax has set and boned for a week - you can choose to add spray carnauba wax on top of the Glanzwax. A spray carnauba wax is the most affordable and the easiest product to use to add an additional layer which will give you even a deeper shine and luster – and will extend the life of your Glanzwax sealant as well. Spray carnauba is affordable and is easy spray-on/wipe-off.

SEATS – Whether your Mercedes has MBTex or premium leather – the best overall seat cleaner is made by Lexol called Leather pH Cleaner. Luxury fashion jeans – indigo blue – often rub off color onto lighter color seats. For best results to clean seat with Lexol pH Cleaner use a COTTON TERRY CLOTH – rather than microfiber exterior wash towels
