The automatic climate control system with 3 climate zones and 3 airflow modes provides additional levels of comfort and control to GLC passengers. The driver and the front passenger are able to regulate temperature and air distribution independently of one another. Temperature and airflow for the rear can be adjusted separately as the 3rd zone.

Overview of the THERMOTRONIC automatic climate control:

- Three climate zones with individual temperature controls (driver's side, front passenger side and rear)
- Automatic control of temperature, air distribution and airflow
- Air distribution for driver's and front passenger sides individually and separately adjustable
- 3 airflow modes for setting the airflow – diffuse, medium or focused
- Indirect ventilation for the passenger compartment in the dashboard
- Sensors keep the climate constant at the desired level for each zone
- Constant monitoring of incoming air for harmful gases with automatic air recirculation setting
- A fine-particle activated charcoal filter improves the air quality in the vehicle. It filters dust, soot and pollen from the air and also reduces pollutants and unpleasant odors
- Dew point sensors prevent the windows from fogging up and ensure energy-efficient air conditioning
- Rear control unit for regulating temperature and airflow in the rear

Smartphone Integration makes safe use of mobile devices possible while on the move. The connection to the smartphone allows access to up-to-date software and data such as navigation and traffic information, media (Streaming Media and IP Radio) as well as contact data and messaging. To prevent driver distraction while on the move, there is no complete duplication of smartphone content. A data connection via the mobile phone is necessary for certain functions. Corresponding charges may be incurred depending on the mobile phone contract. The functions supported also depend on the smartphone.
