Trailer Maneuvering Assist (553)

Option Price: \$350. Only with Trailer Hitch (550)

The Trailer Maneuvering Assist now works via a camera-based system and is also suitable for trailers equipped with a separate stabilization device. The optional assist system makes maneuvering with a trailer even easier, more convenient and safer. It automatically regulates the steering angle of the towing vehicle up to a speed of 3 mph and an uphill gradient of up to 15 percent. It is also integrated into MBUX and can be operated intuitively via the touchscreen. In addition to stabilizing the vehicle/trailer combination when reversing, the system can also guide the trailer around freely selectable turns of up to 90 degrees. The steering of the towing vehicle is operated automatically so that the selected angle is maintained. This allows more precise positioning of the trailer. The driver can also select a corresponding function once the trailer has reached the desired direction and needs to reverse in a straight line. The entire maneuvering process can be followed from different camera perspectives on the central display. Dynamic guide lines show the path ahead and the vehicle width. The system must be briefly trained. However, no markings on the trailer are necessary for the visual measurement of the drawbar length.

Roof Spoiler (D11)
