

W220 and W215 ECU and TCU locations.

There is also an electronics unit mounted to the underside of the fuse panel. This is not the TCU even though they look similar.

ECU

Front Of Car →

TCU: It has two connectors and sits flush against the inside of the fender right next to the hood support. I had to pull the fuse panel up to unlock the connectors

Both are located in the fuse panel under the hood on the passenger side, right by the hood support strut.
