

**TRANSMISSION 722.6/9, 724.2, 725.0**

**Modification notes**

5.9.13	Content added for transmission 724.2, 725.0		
--------	---	--	--

**i** We hereby inform you about current changes to the Specifications for Operating Fluids:

**5-speed automatic transmission 722.6:**

Only transmission oil as per Specifications for Operating Fluids sheet **236.14** may be used!

**7-speed automatic transmission 722.9 up to transmission sequence number 2834526 (except vehicles with engine 629)**

Only transmission oil as per Specifications for Operating Fluids sheet **236.14** may be used!

**7-speed automatic transmission 722.9 (in combination with engine 629 without any limit on production period and irrespective of oil pan installed)**

Only transmission oil as per Specifications for Operating Fluids sheet **236.14** may be used!

**7-speed automatic transmission 722.9 as of transmission sequence number 2834527 (in combination with engine 113, 152, 156, 157, 275, 279)**

Only transmission oil as per Specifications for Operating Fluids sheet **236.15** may now be used!

**i** The following control features and information must be observed to ensure that 7-speed automatic transmission 722.9 is filled correctly: For Xentry DAS version 05/2010, add-on 1476 is available which causes a reference to the specified transmission oil to be displayed before the transmission oil temperature is read out.

Transmission **722.9** can be identified by the differently shaped oil pan (see **picture 1** and **picture 2**).

As from the middle of June 2010, AKUBIS direct and SDmedia contain a film documenting the filling process.

**i** The modified Specifications for Operating Fluids are available in the table, the corresponding BB documents in the WIS or the BeVo Portal on the internet at:

<http://bevo.mercedes-benz.com>

**7-speed automatic transmission 722.9 as of transmission sequence number 2834527 (except vehicles with engine 113, 152, 156, 157, 275, 279, 629)**

Only transmission oil as per Specifications for Operating Fluids sheet **236.15** or **236.16** may now be used!

**7-speed automatic transmission 724.2**

Only transmission oil as per Specifications for Operating Fluids sheet **236.15** may now be used!

**9-speed automatic transmission 725.0**

Only transmission oil as per Specifications for Operating Fluids sheet **236.16** may now be used!

**Exception:**

Transmission 722.6, 722.9 up to transmission sequence number 2834526 as well as transmission 722.9 in combination with engine 629 must not be filled with **FE-ATF 134** and **ATF D97**.

**!** Separate filling units must be used for all oils (236.14, 236.15, 236.16)

because these oils must never be mixed with other oils.

**Exception:**

Transmission 722.6/9, the associated electrohydraulic controller units and torque converters, which are available from the parts service, are checked at the production plant using FE ATF-134 only. It is therefore possible that these parts have residual traces of FE ATF-134. In this case, the transmission, controller unit and torque converter do **not** have to be cleaned. The transmission can be filled with the corresponding gear oil (as per this SI) immediately after it has been installed.

for viewing.
