

- ▶ **To remove:** pull the floormat from retainers ②.
- ▶ Remove the floormat.

Infrared reflective windshield

The infrared reflecting glass prevents the vehicle interior from becoming too hot. It also blocks radio waves from penetrating the windshield up into the gigahertz range.

In order to operate radio-controlled equipment, e.g. toll recording systems, areas ① on the windshield are permeable to radio waves. You can install radio-controlled devices in these areas.

These areas can best be seen from outside the vehicle by observing the light reflected off the windshield.
