

Noise in driver or front passenger seat when pressure applied to backrest

Topic number	LI91.10-P-063385
Version	1
Design group	91.10 Front seats
Date	02-22-2016
Validity	All model series driver or front passenger seats
Reason for change	

Complaint:

Creaking or grunting noise in seat when pressure applied to backrest.

Cause:

Throughout the service life of the vehicle, tension may occur in the seat structure that generates noise.

Remedy:

1. Unfasten the 4 bolts of the seat height adjuster from the body but do not remove them. The seat may not be removed!!
2. Fasten the seat height adjuster using the 4 bolts again and tighten to 50 Nm torque. (AR91.10-P-1000lf)
